# How can I help reduce healthcare associated infections?

Infection control is important to the well-being of our patients and for that reason we have infection control procedures in place. Keeping your hands clean is an effective way of preventing the spread of infections. We ask that you, and anyone visiting you, use the hand rub (special gel) available at the main entrance of the hospital and at the entrance to every ward before coming in to and after leaving the ward or hospital. In some situations hands may need to be washed at the sink using soap and water rather than using the hand rub. Staff will let you know if this is the case.

## **Puree Diet**

**Patient Information Leaflet** 

Safe & compassionate care,

every time

Your Plan
8

## Introduction

You have been given this leaflet because you or the person you are caring for has been having problems swallowing food or drinks. This is called 'dysphagia'.

## What is dysphagia?

Dysphagia can be one or more of the following:

- Finding it hard to swallow food or drinks
- Finding it hard to keep food and drinks in the mouth
- · Finding it hard to chew food
- Finding food left in your mouth after eating
- Food or drink 'going down the wrong way' making you cough

Food or drink that 'goes down the wrong way' can cause chest infections which can be very serious.

Some people who have dysphagia do not choke on food or drink even if it 'goes down the wrong way'. This is not always a good sign because it means that food or drink can 'go down the wrong way' without the person even being aware of it.

This is why it is very important to follow the advice that you have been given in this leaflet.

If you notice any of the following contact your speech and language therapist (SLT) or re-refer yourself to a speech and language therapist:

- · Coughing or choking when eating or drinking
- · Gurgly, wet voice after eating or drinking
- Food staying in the mouth after eating
- Regular chest infections e.g. every 6 -10 weeks throughout the vear
- Unplanned weight loss

This leaflet has been designed to help you choose foods that can make your swallowing easier and safer.

## What is a pureed diet?

#### Pureed food:

- Is smooth and contains no bits e.g. lumps, seeds, skins, husks, fibres, gristle, bone
- Holds its shape on a plate, and the prongs of a fork will make a mark on the foods surface
- Can be eaten with a fork because it does not drop through the prongs
- Cannot be poured
- Does not spread out if spilled
- Does not require chewing

#### How to make pureed food

- To obtain the right consistency you will need either a liquidiser, a food processor or a hand blender.
- Before pureeing remove skins, large seeds, bones (e.g. in fish).
- Meats, vegetables and potatoes should be well cooked and tender before pureeing - try stewing or casseroling.
- Some foods may also need to be sieved after pureeing to remove bits such as skins.

You may need to add extra liquid to some food to ensure you obtain the correct texture but be careful not to add too much (see **What is a pureed diet?** above).

#### **Questions you might have**

#### Can I use baby foods?

Baby foods are not designed for adults and therefore will not give your body all the nutrients it needs. Baby foods also tend to be quite bland which does not suit adult tastes. They are not advised for people with dysphagia.

#### What about mouth care?

Chewing helps produce saliva which keeps the mouth healthy. Cleaning your mouth and teeth regularly is very important because you chew less when eating a pureed diet, so you produce less saliva. **To sweet foods -** add full fat yoghurt, cream, evaporated milk, dried skimmed milk powder, custard, ice-cream (check with your SLT whether this is suitable for you), sugar, glucose, honey, syrup, seedless jam, butter or margarine (not low fat) For example:

to puddings e.g. sponge add full fat yoghurt, evaporated milk, custard, ice-cream (check with your SLT whether this is suitable for you), cream, sugar, glucose, honey, syrup, seedless jam, butter or margarine (avoid low fat spread),

to milky drinks add dried skimmed milk powder, evaporated milk, ice-cream, cream to breakfast cereals or porridge add fortified milk, evaporated milk, full fat yoghurt, cream, sugar, glucose, honey, golden syrup

Please refer to accompanying "Which foods can I puree?" tables for more ideas. These are available separately from your dietitian or speech and language therapist.

It is important to use a high calorie liquid such as:

- Full fat milk or Fortified milk (see page 5 for recipe)
- Cheese sauce, white sauce, parsley sauce, bread sauce
- Gravy
- Custard
- Fruit juice (avoid those labelled diet, sugar free and no added sugar)

For more advice see Fortifying food (page 5).

**Do not use water** because this will dilute the foods calories and flavour.

#### Making pureed food look and taste nice

- Puree foods separately to retain flavours, and arrange the purees individually on the plate.
- Try to serve brightly coloured vegetables next to paler foods e.g. pureed carrots or broccoli with pureed potato and pureed chicken in a creamy sauce.
- Try adding more flavour when pureeing food to make eating more enjoyable e.g. try using spices, herbs, soy sauce, Worcester sauce, tomato sauce, barbecue sauce, curry sauce or mint jelly.
- Pureed food can be piped or scooped to make it look more appealing.

#### **Nutrition**

If you need to eat a pureed diet, it can be hard to meet all your nutritional needs and it is important to choose a wide variety of foods.

Eat little and often – e.g. 3 small meals and 2-3 snacks and try to have the following every day:

- 3 portions of full fat milk or milk containing foods (e.g. cheese in a pureed meal, thick and creamy yoghurt (may need to be sieved to remove fruit pieces)
- 3 portions of meat, chicken, fish, eggs, quorn, soya, lentils or beans (these may need to be pushed through a sieve to remove skins)
- 3 portions of potatoes, pasta or cereal
- 5 portions of fruit and vegetables
- At least 6 8 mugs or glasses of fluid you may need to thicken your drinks and your SLT will advise you about this.
- You may be advised to choose nourishing drinks (e.g. fruit juice; smoothies; milky drinks such as hot chocolate, milky coffee, milkshakes, yoghurt drinks, malted drinks (Ovaltine, Horlicks) – all these can be made with fortified milk – see Fortifying food)

## **Fortifying food**

This is a way of increasing the nutrient and energy content of your food and drink without increasing your portion sizes.

Fortifying foods can make it easier for you to eat enough calories and protein every day.

**Fortified milk** - Add 4 tablespoons of dried skimmed milk powder to each pint of full fat milk and use this as you would use normal milk (e.g. in drinks, porridge, custard)

**To savoury foods** - add cheese, fortified milk, dried skimmed milk powder, gravy, cream, crème frâiche, or butter/margarine (avoid low fat spread)
For example:

to thick, smooth soups add grated cheese, dried skimmed milk powder, evaporated milk, cream. Try making cuppa soup with fortified milk instead of water. (If you need to thicken drinks, soups will need to be thickened too).

**to sauces** add evaporated milk, full fat natural yoghurt, grated cheese, smooth nut butter, butter or margarine cream

to mashed potato add grated cheese, full fat mayonnaise or salad cream, milk based sauces, cream, butter or margarine (avoid low fat spread) or olive oil to vegetables add grated cheese, full fat natural yoghurt, full fat mayonnaise, butter, margarine (avoid low fat spread) or olive oil.
