

Spot the Problem

Not everything in the pictures is wrong but can you work out what is?

(please allow a little poetic license as I am not a graphic designer!)

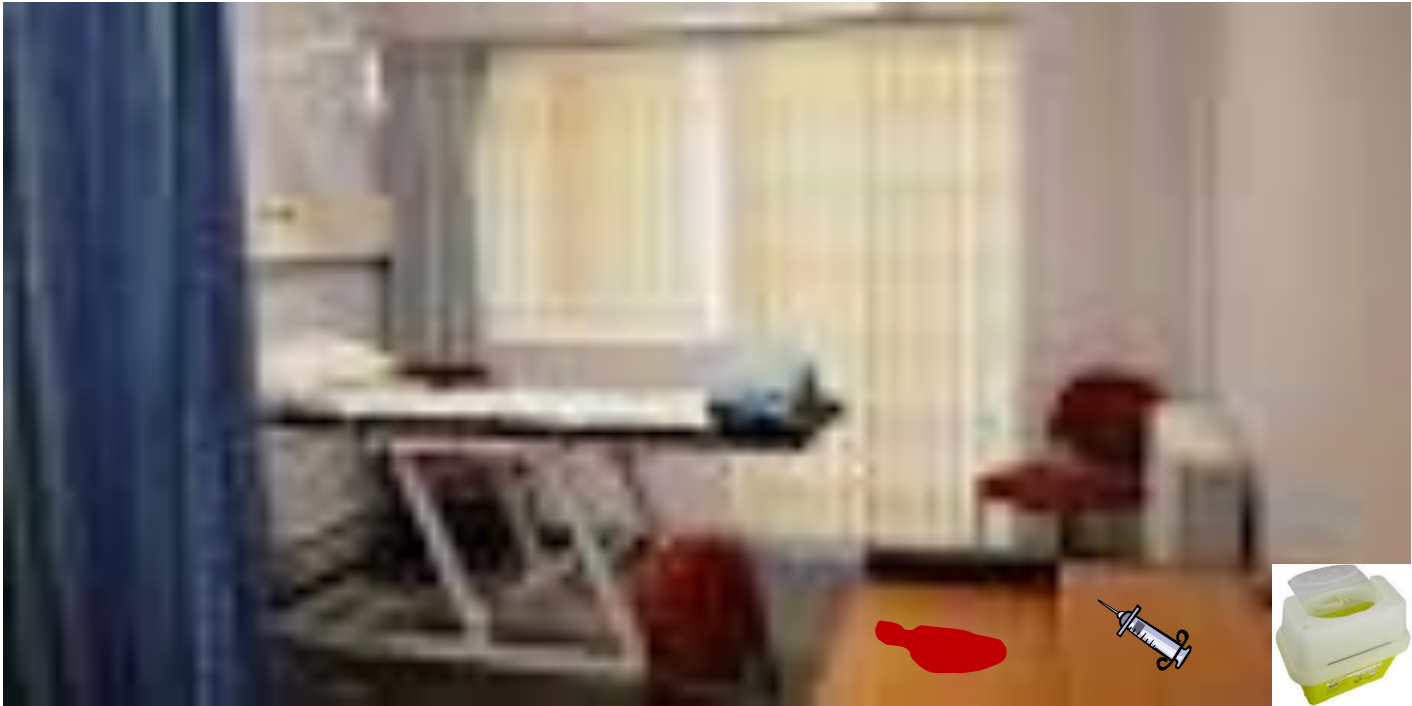

What's wrong

- Mop in corner stored with head in the bucket
– should be store head up preferably in a hook on the wall so that it can drain easily
- Unlabelled sharps container
- Waste overflowing bin.
- Bin not foot operated.
- Sink not compliant with HTM64 – has an overflow

What's wrong

- Male HCW not bare below elbows - has a watch on
- Making a bed with a blood spill – not wearing PPE
- Female HCW has a cut on her arm which is not covered
- Towels on the floor by the linen trolley
- Sharps bin is overflowing
- Flouncy curtains are not recommended

What's wrong?

- Discarded syringe on the work surface
- Blood spill on the floor which hasn't been attended to
- Temporary closure mechanism is not on the sharps bin
- Dressings are out of date

What's wrong?

- HCW wearing mask hanging around her neck
- Non clinical waste in the clinical waste bag
- Drying their hands with a fabric towel.
- Re-contaminating hands when using the bin because it is not foot operated
- Patient is vomiting but the HCW may used alcohol to clean their hands
