

# Public Health Community Board Profile 2020 – Haddenham and Waddesdon

---

## Why are communities important for our health?

The community we live in is one of the most important factors for our health. We thrive in communities with strong social ties, a feeling of togetherness and a sense of belonging. Our local social, economic and physical environment can affect our health directly, the health behaviours we adopt such as being physically active, and sometimes whether we access health and care services. The local environment we live in is vitally important throughout the whole of our life course, from *before* we are born right up until the end of our lives.

The indicators included in this Community Board Profile are all important markers of the health and wellbeing of your community, and highlight areas where things are going well but also importantly where improvements can be made. Strong communities will be a key driver for recovery from the impact of the COVID-19 pandemic.

**Please note that this profile is a high level overview of health and wellbeing indicators from existing data. Communities will have more intelligence on local issues and assets which can be incorporated into the full picture of local needs and how they can best be met.**

## The people in your community

It is important to understand who lives in your community to understand their health and wellbeing. Factors such as age, ethnicity and level of deprivation influence our physical and mental health. Understanding these factors may help decide which interventions may be needed to improve the overall health and wellbeing of the community.

### Haddenham and Waddesdon community board:

- Has a population size of **32,242**
- Has a **similar age profile** compared with County, with 6.5% of the population < 5 years old (County average = 6.0%) and 18.3% > 65 years old (County average = 18.7%)
- Has **a less ethnically diverse population** than the County overall – Black, Asian and Minority Ethnic (BAME) population = 3.8%, compared with 13.6% in the County
- Has the **7<sup>th</sup> highest score on the national Index of Multiple Deprivation measure<sup>1</sup>** in the County (a higher score indicates a greater level of deprivation based on a range of aggregated indicators) – lower than the County overall
- Has a **slightly higher life expectancy for both men and women** compared with the County average (and higher than the England average)

---

<sup>1</sup> The Index of Multiple Deprivation (IMD) is The Government's official measure of relative deprivation in small areas in England called lower-layer super output areas. IMD includes seven domains to provide an overall measure. The domains are: income deprivation; employment deprivation; education, skills and training deprivation; health deprivation and disability; crime; barriers to housing and services; and living environment deprivation.

## Natural & built environment in your community

Being in contact with the natural environment is vital for our mental wellbeing and physical health at all ages. Air pollution contributes to a range of poor health outcomes including low birth weight babies, stroke, dementia, lung disease and heart disease. The environment affects our mental health and ability to adopt healthy behaviours such as being physically active.

### Haddenham and Waddesdon community board:

- Has a **lower proportion of green space coverage** compared with the South East average (0.9% vs 3.2%)
- Has a **slightly lower level of air pollution** compared with the South East average

## Growing up in your community

What happens in pregnancy and early childhood impacts on physical and mental health all the way to adulthood. Important factors in the early years include being born at a healthy birth weight, growing up in a household with sufficient income, receiving a good education and adopting healthy behaviours from childhood.

### Haddenham and Waddesdon community board:

- Has the **3<sup>rd</sup> highest number of live births** in the County
- Has a **slightly lower proportion of low birth weight babies** (6.4%) than the County average (7.0%)
- Has a **lower proportion of children living in income deprived households or poverty** (9.0%) compared with the County average (12.1%)
- Has a **higher proportion of 'School Ready' children** (78.1%) compared with the County average (74.3%)
- Has a **lower proportion of overweight or obese Year 6 children** (24.7%) compared with the County average (29.4%)

## Health behaviours in your community

The four main health behaviours – smoking, physical inactivity, unhealthy diet and alcohol misuse - account for 40% of all years lived with ill health and disability. Addressing these four behaviours could lead to a reduction by up to 80% in new cases of heart disease, stroke and type 2 diabetes and a reduction of 40% in new cases of cancer. It has been shown that obesity in adults is a risk factor for worse outcomes following infection with coronavirus (COVID-19) as well as other poor health outcomes.

### Haddenham and Waddesdon community board:

- Has a **slightly lower smoking prevalence** (12.8%) than the County average (14.6%)
- Has a **slightly higher proportion of physically inactive adults** (17.9%) compared with the County average (16.5%)
- Has a **higher proportion of obese adults** (34.5%) compared with the County average (31.4%)
- Has a **similar rate of residents receiving treatment for alcohol and non-opiate misuse** compared to the County overall

## Long term conditions and healthcare usage in your community

Long term conditions such as diabetes not only cause significant amounts of poor health to individuals but they also lead to higher use of health care and social care. These conditions are often preventable by adopting healthy behaviours as above, but also through dedicated prevention strategies such as the NHS Health Checks programme. People with some long term conditions like diabetes and heart disease appear to be at higher risk of poorer outcomes following infection with coronavirus (COVID-19).

### Haddenham and Waddesdon community board:

- Ranks **in the mid-range for proportion of adults with high blood pressure, diabetes and cancer** but has the **4<sup>th</sup> highest level of depression** compared with the other Community Boards
- Ranks **10/16<sup>th</sup> highest for emergency admissions to hospital overall, for both adults and children** compared with the other Community Boards
- Has a **higher rate of uptake of NHS Health Checks** (47.8%) compared with the County average (43.8%)

## Vulnerable groups in your community

Individuals in certain vulnerable groups (e.g. those who are socially isolated, unemployed or living on low incomes) experience worse mental and physical health outcomes compared with the general population. People who experience social isolation and loneliness are more likely to experience depression and anxiety, be physically inactive, smoke and drink alcohol and have an increased risk of heart disease and dementia and die prematurely.

### Haddenham and Waddesdon community board:

- Has a **lower proportion of unemployment benefit claimants** (1.9%) compared with the County average (2.9%)
- Has **4,824 residents living in households at higher risk of food poverty** – 15.3% of the County total
- Has a **lower rate of domestic abuse related incidents and crime** than the County average
- Has a **higher average personal debt per person** (£978) amount to the County average (£787)
- Has small areas in which **the risk of loneliness (65+ years) are amongst the highest** in the County
- Has **the 9<sup>th</sup> highest proportion of residents seeking support from the Citizens Advice Bureau** in the County (most frequent issue advice was requested for before the COVID-19 lockdown was **benefits and tax credits**, and following the lockdown was **housing**)

## The impact of COVID-19 in your community

COVID-19 has undoubtedly had an impact across Buckinghamshire. The pandemic has brought out the best in many communities in terms of community spirit and volunteering efforts. However, COVID-19 has also affected groups in the community in terms of unemployment, debt, food poverty and mental health.

### In Haddenham and Waddesdon community board, as of 26<sup>th</sup> May 2020:

- There were **955 residents shielding** – 5.3% of County total
- There were **208 residents receiving government food deliveries** – 7.3% of the County total
- There were **48 residents requesting essential supplies** – 5.8% of the County total
- There were **219 residents requesting help with basic care** – 5.9% of the County total

## Recommendations based on this public health profile

1. Reducing **smoking, childhood obesity** and **physical inactivity** are key areas for your community as they are major causes of preventable ill health and death. The Council's Live Well Stay Well service can support your community to stop smoking, lose weight and get active. Anyone can self-refer themselves to this service.
2. While this Community Board has mid-range levels of most long-term medical conditions, attention should be paid to the higher reported rates of psychological conditions (i.e. **depression**). Initiatives that support **resilience, employment and community cohesion** are worth considering.
3. **Loneliness for people aged 65 years and older** is a key area for some parts of your community. Programmes to build community cohesion or encourage befriending should be explored.
4. This community has been impacted by **COVID-19**. People with long term conditions like diabetes and heart disease appear to be at higher risk of poorer outcomes following infection with coronavirus. Haddenham and Waddesdon has a slightly higher rate of uptake of NHS Health Checks compared to Buckinghamshire, but still less than 50% of those eligible. This programme addresses the risk factors of heart disease and kidney disease and therefore **promoting the NHS Health Checks is strongly encouraged**. Other programmes to support community members at risk of COVID-19 due to their long term conditions should also be considered. Additionally, providing support to residents affected by increasing levels of **debt** during the pandemic should be considered. **Financial stress can negatively impact mental health**, which may already have worsened by other aspects of the pandemic including restrictions due to lockdown.

# Haddenham and Waddesdon Public Health Community Board Profile 2020

The people in your community (population size = 32,242)

### Age structure (2018)

### Ethnicity (2011 Census)

### Life Expectancy at birth (males) by ward, 2014-18

### Life Expectancy at birth (females) by ward, 2014-18

82.5 years  
81.8 years  
79.6 years

Haddenham and Waddesdon  
Buckinghamshire  
England

85.7 years  
85.0 years  
83.2 years

### Index of Multiple Deprivation, 2019

Haddenham and Waddesdon 9.0  
Buckinghamshire 10.1  
England 21.7

(a higher value indicates a greater level of deprivation)

## Growing up in your community

## Notes

<sup>1</sup> Obesity data is calculated as a % of those with a BMI recorded. The number of patients with a recorded BMI will vary across practices and therefore the figures presented in this profile are to be used as an indication only.

<sup>2</sup> Data available for all persons registered with a Buckinghamshire CCG practice. Data not available for Buckinghamshire county residents who are registered with a non-Bucks practice (approximately 5% of population).

<sup>3</sup> Figure is likely to be an underestimate as missing postcode data for around 1,000 residents in Buckinghamshire on that daily download.

<sup>4</sup> Food poverty risk calculated based on household composition and benefits claims, calculated by University of Southampton.

<sup>5</sup> Local Insight data is based on modelled estimates
