# Overview

## Why are communities important for our health?

The community we live in is one of the most important factors for our health. We thrive in communities with strong social ties, a feeling of togetherness and a sense of belonging. Our local social, economic and physical environment can affect our health directly, the health behaviours we adopt such as being physically active, and sometimes whether we access health and care services. The local environment we live in is vitally important throughout the whole of our life course. In addition, strong communities will be a key driver for recovery from the impact of the Covid-19 pandemic.

The indicators included in this Community Board Profile are all important markers of the health and wellbeing of your community and provide a high level overview from existing data. They highlight areas where things are going well but also importantly where improvements can be made. Some data is provided at geographic levels smaller than community board. For further data please see Local Insight ([Local Insight](#) [communityinsight.org](#)), and Local Health ([Local Health - Public Health England](#))

**Please note: If an indicator flags as higher or lower than a comparator this does not suggest statistical significance for that comparison unless stated, therefore will be indicative only.** Future refreshes of this profile will hopefully include more of this detail. The data is mostly pre-COVID and provides a useful baseline of the population needs before the pandemic which can also be used to look at the impact of Covid-19 over time. Communities will have more intelligence on local issues and assets which can be incorporated into the full picture of local needs and how they can best be met.

### Population

There are 19,899 people living in the Wing and Ivinghoe Community Board area

### Vulnerable groups

6.7% of children are living in poverty in the Wing and Ivinghoe Community Board area, compared with 9.5% across Buckinghamshire

### Housing

1.4% of households lack central heating in the Wing and Ivinghoe Community Board area, compared with 1.4% across Buckinghamshire

### Crime and safety

There are lower levels of crime in Wing and Ivinghoe compared with the Buckinghamshire average (IoD 2019 Crime Rank)

### Health and wellbeing

Wing and Ivinghoe Community Board has a higher life expectancy for men (82.7 years) compared to the Buckinghamshire average of 81.8 years (England average 79.8).The life expectancy for women is lower (84.6 years) compared to the Buckinghamshire average of 85.1 years (England average 83.4).

### Education and skills

14.7% of people have no qualifications in the Wing and Ivinghoe Community Board area compared with 16.8% across Buckinghamshire

### Economy

3% of people are in receipt of unemployment benefit (JSA and UC) in the Wing and Ivinghoe Community Board area compared with 4.6% across Buckinghamshire

### Access and transport

7.4% of households have no car in the Wing and Ivinghoe Community Board area compared with 12.6% across Buckinghamshire

# People in your community

Board Name

Wing and Ivinghoe

It is important to understand who lives in your community to understand their health and wellbeing. Factors such as age, ethnicity and level of deprivation influence our physical and mental health. Understanding these factors may help decide which interventions may be needed to improve the overall health and wellbeing of the community. For example, areas with higher levels of deprivation are at higher risk of developing multiple long term conditions at a younger age so preventative interventions are needed earlier in the lifecourse.

Age Structure

There are 19,899 people living in the Wing and Ivinghoe Community Board area.

Wing and Ivinghoe Community Board has fewer young people than the county average, with 18.6% of the population under 16 years of age (Buckinghamshire average 20.7%, England average 19.2%) and more older people than the county average, with 20.4% of the population aged 65+ (Buckinghamshire average 18.9%, England average 18.4%)

Wing and Ivinghoe Community Board is less ethnically diverse than Buckinghamshire as a whole. Ethnic minorities (excluding white minorities) make up 4% of the population compared with 13.6% in Buckinghamshire overall, and 14.6% in England.

less deprived more deprived

The Indices of Multiple Deprivation is a relative measure of deprivation of small areas. A higher score indicates an area is experiencing higher deprivation.

Wing and Ivinghoe Community Board has a deprivation score of 7.6 within Buckinghamshire (Buckinghamshire as a whole is 10.1). The map shows the pockets of higher deprivation across this community board.

*The maps do not match the Community Board boundary exactly. Data is being presented by the Lower Super Output Areas (LSOA) covering the Community Board. These are geographic areas with a mean population of 1,500 people and their boundaries can cross the Community Boards boundaries. The interactive profile will enable the maps to be explored in more detail.*

# Life Expectancy

Life expectancy is a summary measure of illness and death in an area. It provides an estimation of how many years a newborn baby would expect to live based on current death rates.

Wing and Ivinghoe Community Board has a higher life expectancy for men (82.7 years) compared to the Buckinghamshire average of 81.8 years (England average 79.8).

The life expectancy for women is lower (84.6 years) compared to the Buckinghamshire average of 85.1 years (England average 83.4).

The maps highlight areas within the community board and whether they are significantly different compared to the Buckinghamshire average.

## Impact of COVID

Data presented here is pre-COVID and looks at life expectancy up to 2019. Given the very high level of excess deaths due to the Covid-19 pandemic, life expectancy fell in 2020 across the country.

Compared with 2019, life expectancy in England in 2020 was 1.3 years lower for males and 0.9 years lower for females. In Buckinghamshire it was 1.3 years lower for males and 1.5 years lower for females.

This drop in life expectancy has not been experienced equally across the country and national analysis shows more deprived areas have seen a larger drop which has resulted in greater inequalities in 2020.

*The maps do not match the Community Board boundary exactly. Data is being presented by the Middle Super Output Areas (MSOA) covering the Community Board. These are geographic areas with a mean population of 7,200 people and their boundaries cross the Community Boards boundaries. The interactive profile will enable the maps to be explored in more detail.*

# Growing up in your community

Board Name

Wing and Ivinghoe

What happens in pregnancy and early childhood impacts on physical and mental health all the way to adulthood. Important factors in the early years include being born at a healthy birth weight, growing up in a household with sufficient income, receiving a good education and adopting healthy behaviours from childhood.

Births (2019)

227

Low Birthweight babies

7.9%

Low birthweight increases the risks of childhood death, developmental problems and is associated with poorer health in later life. Wing and Ivinghoe Community Board had 227 births in the latest year. Of these births 7.9% had a low birthweight, which is higher than the Buckinghamshire average of 6.8% (England average 6.8%).

Children in poverty

6.7%

There is a lower proportion of children living in poverty (6.7%) compared to the Buckinghamshire average of 9.5%. (England average 17.0%).

The children in poverty measure shows the proportion of children (aged 0-15) in families in receipt of out of work benefits, or in receipt of tax credits where their reported income is less than 60% of the median income.

Child excess weight Year 6

34.5%

34.5% of children in year 6 (ages 10 and 11 years), are overweight or obese compared to 31.1% in Buckinghamshire as a whole.

The risk of obesity in adulthood and future obesity-related ill-health are greater as children get older.

School Readiness and Attainment data is not currently available due to Covid-19

# Health behaviours

Board Name

Wing and Ivinghoe

The four main health behaviours – smoking, physical inactivity, unhealthy diet and alcohol misuse - account for 40% of all years lived with ill health and disability. Addressing these four behaviours could lead to a reduction by up to 75% in new cases of heart disease, stroke and type 2 diabetes and a reduction of 40% in new cases of cancer.

The pandemic has led to a rise in unhealthy behaviours. A local survey in Buckinghamshire, following the first lockdown, found 22% of respondents said they were drinking more alcohol during lockdown, a fifth (20%) said they were eating less healthy and nutritious food and more than a third (38%) were doing less exercise. National surveys show 40% of the population gained weight during the pandemic and demand for drug and alcohol services increased. In Buckinghamshire, this demand increased by 15% for alcohol services over 2020.

Adult Obesity

Data will be added to this section once available

Adults who are physically inactive

18.4%

- lower proportion of adults who are physically inactive (18.4%) compared to the Buckinghamshire average (20.3%)

Smoking

Data will be added to this section once available

Treatment for drugs and alcohol (rate per 100,000 population)

97.3

- lower rate of residents (per 100,000 population) receiving treatment for alcohol and non-opiate misuse (97) than the county overall (134)

Data on disease registers will be added to this section once available.

# Long term conditions and healthcare use

Long term conditions not only cause significant amounts of poor health to individuals but they also lead to higher use of health care and social care. These conditions are often preventable by adopting healthy behaviours, but also through dedicated prevention strategies such as the NHS Health Checks programme. In addition, people with some long term conditions, such as heart disease, are at higher risk of poorer outcomes following infection with coronavirus (COVID-19).

Uptake 2019/20

45.0%

NHS Health Checks (%)

Wing and Ivinghoe Community Board (where a rank of 1 out of 16 indicates higher emergency admissions):

- Ranks 5 for emergency admissions overall
- Ranks 7 for cancer emergency admissions
- Ranks 6 for cardiovascular emergency admissions
- Ranks 5 for dementia emergency admissions
- Ranks 3 for mental health emergency admissions
- Ranks 9 for under 5 years emergency admissions
- Ranks 10 for respiratory emergency admissions

The admissions data in this profile is pre-Covid-19 and covers 2019/20 (\*due to smaller numbers for cancer and mental health emergency admissions, in a single year, data presented for these covers 2017 to 2019). Data is presented showing whether the rate is statistically significantly different to the Buckinghamshire average.

The NHS Health Check programme aims to help prevent heart disease, stroke, diabetes and kidney disease. A high take up is important to identify early signs of poor health leading to opportunities for early interventions. Wing and Ivinghoe Community Board had a higher uptake of health checks (45.0%) compared with the Buckinghamshire average (43.8%).

The standardised rates used here are taking into account differences in ages of populations so comparisons across areas can be made. The rates above are based on number of admissions per 100,000 population - all age population is used for all except under 5 admissions. Red indicates the admission rate calculated is statistically significant higher than the Buckinghamshire average, Amber indicates the rate is similar and Green indicates the rate is significantly lower.

Source: Long term conditions - HES data extracted from NHS Digital Data Access Environment (DAE) (2019/20); Office for National Statistics (ONS) mid-year population estimate for relevant year; TCR (Nottingham) Quest Health Checks Reporting; and Buckinghamshire Public Health Intelligence.

# Vulnerable groups

Board Name

Wing and Ivinghoe

Individuals in certain vulnerable groups (e.g. those who are living on low income, socially isolated or unemployed) experience worse mental and physical health outcomes compared with the general population. For example, people living in more deprived circumstances are more likely to have multiple long term conditions and develop these at a younger age compared to those living in least deprived circumstances. The Covid-19 pandemic also continues to have wider impacts on communities including social, educational and economic impacts which affect health and wellbeing. These impacts have also not been experienced equally across the population and many have increased existing health inequalities.

Personal debt  
(unsecured loans) per  
person aged 18+  
**£751.80**

Personal debt in the Wing and Ivinghoe Community Board area (£751.81) is greater than the Buckinghamshire average (£751.71), and greater than the England average (£661.90).

Unemployment Benefit  
Claimants  
**2.5%**

Wing and Ivinghoe Community Board has a lower proportion of unemployment benefit claimants (2.5%) compared to the Buckinghamshire average (3.9%), and a lower proportion than the England average (5.6%).

Food Poverty  
**3,206**

Residents living in households at  
higher risk of food poverty  
(September 2019)

Wing and Ivinghoe Community Board residents have a below average risk of food poverty compared to the county overall. 3,206 residents are living in households at a higher risk of food poverty (13.8% of the Community Board population). This compares with 79,896 people in Buckinghamshire overall (14.9% of the county population).

[Return to home page](#)

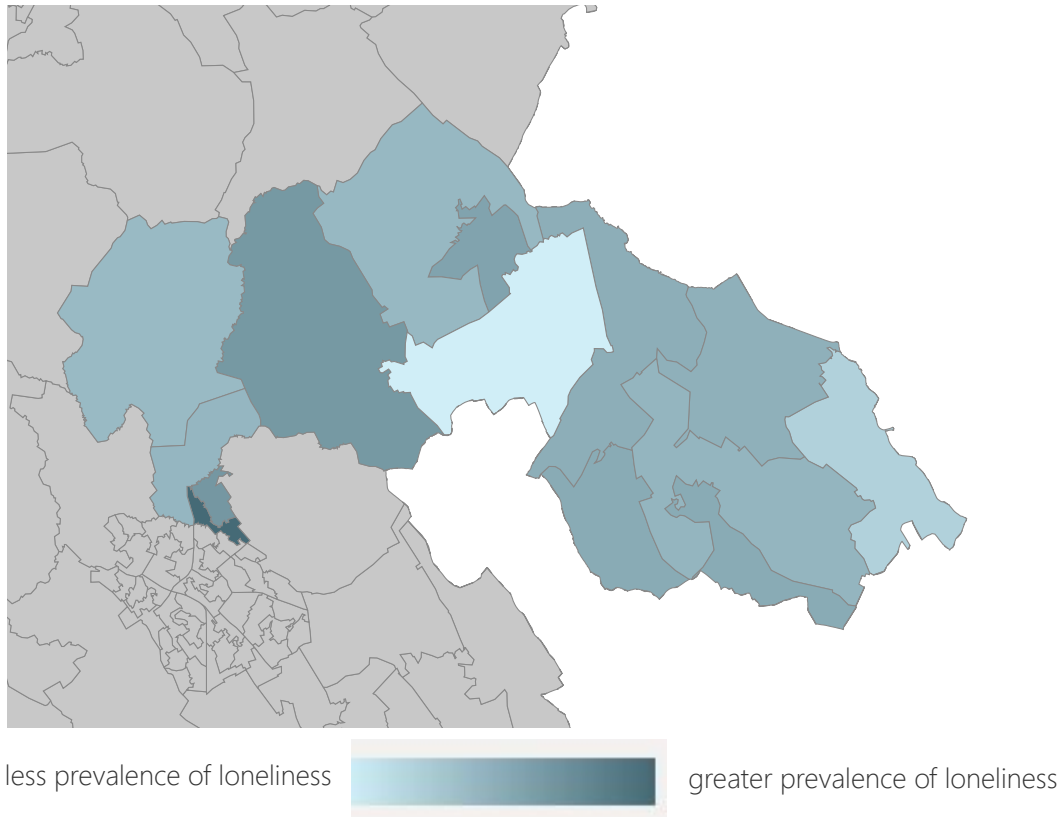

# Vulnerable groups (2)

Board Name ▼

Wing and Ivinghoe ▼

People who experience social isolation and loneliness are more likely to experience depression and anxiety, be physically inactive, smoke and drink alcohol, have an increased risk of heart disease and dementia, and die prematurely. Adults most at risk of being lonely, and increasingly over the pandemic, have one or more of the following characteristics: they are young, living alone, on low incomes, out of work and, or with a mental health condition.

Probability of loneliness by LSOA  
(a value closer to 0 predicts a greater prevalence of loneliness)

Data is difficult to collect on social isolation and loneliness. The indicator presented on this page shows an estimate of risk of being lonely in the older age groups at small area geographies within the community board area.

Loneliness and social isolation can affect people of all ages though, including children, and can have a significant impact on health and wellbeing. Nationally, people aged 16 to 24 years were more likely to say they felt lonely than any other age group. During October 2020 and February 2021 an estimated 11.8% of the Buckinghamshire population (16+ years) reported feeling lonely.

The probability of loneliness in those aged 65 years and over in Wing and Ivinghoe is lower (-4.23) than the Buckinghamshire average (-4.18). The average for England is -3.9. A value closer to 0 predicts a greater prevalence of loneliness.

In addition, the proportion of working age residents receiving personal independence payments (PIP) is lower (2.9%) than the Buckinghamshire average (3.2%), and lower than the England average (6.2%).

2.9%

Personal Independence  
Payment (PIP)

Source: Risk of Loneliness - AgeUK, English Longitudinal Study of Ageing (ELSA) survey, June 2010 - July 2012, Irregular (published January 2016); PIP - Department for Work and Pensions (DWP), Monthly (published July 2021); Food poverty - Department for Work and Pensions (DWP), Quarterly (published March 2021).

# Improving community safety (3)

Indices of Deprivation 2019 Score

Wing and Ivinghoe has a lower IMD score than Buckinghamshire, suggesting it has a lower level of deprivation.

The Indices of Deprivation are a relative measure of deprivation across England. The overall Index of Multiple Deprivation combines together indicators under seven different domains of deprivation: Income Deprivation; Employment Deprivation; Education Skills and Training Deprivation; Health Deprivation and Disability; Crime; Barriers to Housing and Services and Living Environment Deprivation. A higher score indicates that an area is experiencing high levels of deprivation.
